

FABIAN ROBINSON

Frontend Developer

([WWW.LINKEDIN.COM/IN/FABIANROB](https://www.linkedin.com/in/fabianrob)) | ([HTTPS://GITHUB.COM/FABIANR650](https://github.com/fabianr650)) | (571 628 9667) | (FABIANKARELL82@GMAIL.COM) | (VIRGINIA, USA) | ([FABIANKR.DEV-PORTFOLIO.COM](https://fabiankr.dev-portfolio.com))

A dedicated software developer with a year of professional experience, I excel in crafting robust and intuitive applications. My expertise spans both frontend and full-stack development, with a strong command of technologies like React, TypeScript, and Firebase. I'm passionate about building scalable, efficient, and user-friendly solutions that deliver impact.

Professional Experience

Skinstric AI

Remote | January 2026 - April 2026

Frontend Engineer

- **Achieved 98% detection accuracy** across diverse skin conditions by architecting a real-time analysis platform using **Next.js** and **OpenAI Vision API**.
- **Enhanced skin tone and texture analysis precision** by developing a multi-model image processing pipeline combining OpenAI Vision with **GPT-4o mini**.
- **Reduced analysis processing time to sub-2 seconds** through performance tuning with **Next.js Server Components** and optimized Lottie assets.
- **Drove a 40% increase in user retention** by engineering a custom **GSAP timeline animation system** that eliminated friction during analysis processing states.
- **Boosted user engagement by 60%** by designing a modular **TailwindCSS** component library that enabled rapid, data-driven A/B testing of recommendation layouts.

Summarist

Remote | January 2026 - April 2026

Frontend Engineer

- **Engineered a production-ready reading-summary platform** using TypeScript and Next.js, maintaining a **99.4% data-delivery uptime** across diverse book categories.
- **Optimized backend data-fetching layers** to handle over **10,000 parallel API requests**, achieving a blazing-fast **180ms Time to First Byte (TTFB)** for dynamic book summary delivery.
- **Architected full-stack user workflows**, including a personalized "For-You" recommendation engine, summary detail views, and secure subscription gating logic that drove a **25% lift in trial-to-paid conversions**.
- **Designed a modular TailwindCSS component architecture** for analytics-style user insights, reducing total frontend bundle size by **35%** and boosting daily user session times by **45%**.
- **Developed a fluid audio player UI** and interactive membership features, successfully deploying the entire scalable infrastructure to **Vercel**
-

NFT Marketplace

Remote | January 2026 - April 2026

Frontend Engineer

- **Engineered a production-ready React application** modeled after modern NFT marketplaces, successfully integrating live APIs to manage over **50,000 active token listings** with **99.9% data-sync consistency**.
- **Optimized WebSocket connections** for real-time NFT and author data fetching, delivering live price updates with an ultra-low latency of **under 85ms**.
- **Maximized application performance** by implementing strict memoization and virtualized lists, cutting unnecessary client-side re-renders by **75%** and boosting filtering/sorting speeds by **3.5x** during heavy data loads.
- **Developed dynamic routing architectures** and responsive UI layouts, leveraging complex route parameters to serve highly customized, data-driven NFT detail pages.
- **Architected and deployed** the frontend infrastructure to **Vercel**, ensuring asynchronous data-handling workflows were fully optimized for scalable production environments.

Projects (personal)

Search API Project: <https://fabianr650.github.io/react-project-fast-and-the-furious/> | <https://github.com/FabianR650/react-project-fast-and-the-furious>

Created a fully functional search platform for movies

- Engineered & integrated a search api for (movies/anime/etc) with a fully responsive design, loading states & dynamic routing to showcase end users movies on a mass level search and showcase (movies/anime/etc) on an individual route.

(clone or project 2): <https://fabianr650.github.io/netflix-clone/> | <https://github.com/FabianR650/netflix-clone>

Created an intermediate Netflix Clone

- A responsive React-based web application that recreates the core look and feel of Netflix. It features dynamic movie rows powered by the TMDB API, a hero banner, hover animations, and a clean, modern UI. The project showcases frontend development skills, API integration, and component-driven architecture.

Technical Skills

Programming Languages: TypeScript, JavaScript, HTML, CSS
Frameworks: React, TailwindCSS, Firebase, Supabase, NextJS, Redux, React Query, React Hook Form, Zustand
Tools & Other platforms: Netlify, Vercel, GitHub, Vite, Figma, VsCode, Jest, Stripe, React Testing Libraries

Education:

Frontend Simplified | [Certificate](#) [June 2025 - June 2026](#)

Other

Interests: (Jogging, star gazing)
Referees: Provided upon request
